Managers Attrition > 50%

Another position' (20 exits) + 2–5 yr tenure spike (Page 1) = experienced employees leaving for better roles. Career stagnation is the silent driver.

Why Did Employees Leave? — Termination Reason Breakdown

● Involuntary ● Voluntary

⚠ 'attendance' and 'performance' appear under both categories — same word, different context depending on who initiated the exit.

Manager Attrition Rates — Teams of 10+

Manager Name	Team Size	Attrition Rate	Voluntary %	Involuntary %
Webster Butler	19	68.42%	68.42%	0.00%
Amy Dunn	21	61.90%	61.90%	0.00%
Kissy Sullivan	22	54.55%	45.45%	9.09%
Simon Roup	16	50.00%	25.00%	25.00%
Michael Albert	20	45.00%	40.00%	5.00%
Elijah Gray	21	38.10%	33.33%	4.76%
Janet King	19	31.58%	26.32%	5.26%
Brannon Miller	20	30.00%	30.00%	0.00%
Kelley Spirea	20	30.00%	20.00%	10.00%
David Stanley	21	28.57%	28.57%	0.00%
Ketsia Liebig	21	23.81%	19.05%	4.76%
John Smith	14	21.43%	14.29%	7.14%
Peter Monroe	13	7.69%	7.69%	0.00%
Lynn Daneault	12	0.00%	0.00%	0.00%

⚠ Managers with fewer than 10 reports excluded. Webster Butler (68%) and Amy Dunn (62%) — all exits voluntary.

Voluntary Exit Reasons — Avoidable vs Not Avoidable

Performance Score — Leavers vs Stayers

Employee... ● Leavers ● Stayers

Needs Improvement is 3× more common in leavers (9.71% vs 3.57%). High performers are nearly 2× more likely to stay.

Flight Risk vs Replacement Cost — 196 Active Employees

47 Critical Risk employees = \$561,565 exposure → ROI Calculator

● Critical Risk ● High Flight Risk ● Low Priority ● Manageable Risk

Meads & Gross (Production Technician I) were paid \$0.42/hour below band minimum. Fixing their pay would have cost **\$874/year** each. Replacing them cost ~\$14,800 each — **17x more**.

△ Cost model = recruiting + 45-day vacancy loss; onboarding and knowledge loss excluded. | 8 Indeed hires assigned avg cost (\$998.69). | Salary grid covers Production & IT/IS only.

What if we intervened? Model the return on a targeted retention program

Adjust the levers to model a retention program targeting the 47 Critical Risk employees.

Intervention Cost per Employee

1500

Target Attrition Reduction %

20

\$70,500

Programme Cost

\$112,313

Projected Savings

59.31%

Net ROI

9

Employees Retained

59.31%

Return on Investment

At \$1,500 per employee, a 20% reduction in Critical Risk attrition retains 9 employees, generating \$112,313 in savings against a \$70,500 programme cost. Net ROI: 59.3%. The investment pays for itself.

Why these inputs? \$1,500 is ~5% of a Production Technician's salary — enough to fund a real retention action, not a token. 20% sits at the cautious end of the typical 15–25% range for retention programs. Conservative on purpose: the business case holds even under skeptical assumptions.

Break-Even: Savings vs Programme Cost by Reduction Target

● Cost ● Savings

At \$1,500/employee, the program breaks even around an 8% reduction — the recommended 20% target clears it comfortably.

Break-even = where savings crosses cost. Beyond that point, every retained employee returns more than they cost to keep.
